

STM32F3DISCOVERY Discovery kit for STM32F303xx microcontrollers

Introduction

The STM32F3DISCOVERY is designed to help you explore the features of the STM32 F3 32-bit ARM® Cortex™-M4 mixed-signal MCU, and develop your applications. It is based on an STM32F303VCT6 and includes an ST-LINK/V2 embedded debug tool interface, Gyroscope ST MEMS, E-compass with accelerometer ST MEMS, LEDs, pushbuttons and a USB mini-B connector.

Convention	Definition
Jumper JP1 ON	Jumper fitted
Jumper JP1 OFF	Jumper not fitted
Solder bridge SBx ON	SBx connections closed by solder
Solder bridge SBx OFF	SBx connections left open

2 Quick start

The STM32F3DISCOVERY is a low-cost and easy-to-use development kit to quickly evaluate and start development with an STM32 F3 series microcontroller. Before installing and using the product, please accept the Evaluation Product License Agreement from www.st.com/stm32f3discovery. For more information on the STM32F3DISCOVERY and for demonstration software, visit www.st.com/stm32f3discovery.

2.1 Getting started

Follow the sequence below to configure the STM32F3DISCOVERY board and launch the DISCOVER application:

1. Check the jumper positions on the board, JP3 on, CN4 on (DISCOVERY selected).
2. Connect the STM32F3DISCOVERY board to a PC with a USB cable type A to mini-B through the USB ST-LINK or USB USER connector to power the board. The red LEDs LD1 (PWR) and LD2 (COM) light up.
3. The eight LED indicators blink sequentially.
4. Press the USER button to enable the MEMS gyroscope sensor.
5. Observe how the blinking of the LEDs indicates the gyroscope movements.
6. Press the USER button again to enable the MEMS e-compass sensor.
7. Keep the board in a horizontal position. One of the eight LEDs lights up to indicate the direction of the north.
8. Tilt the board and the eight LEDs blink again
9. To examine or modify the Discover project related to this demo, visit www.st.com/stm32f3discovery and follow the tutorial. Discover the STM32F303xx MCU features, download and execute programs proposed in the list of projects.
10. Develop your own application using the available examples.

2.2 System requirements

- Windows PC (XP, Vista, 7)
- USB type A to Mini-B USB cable

2.3 Development toolchain supporting the STM32F3DISCOVERY

- Altium®, TASKING™ VX-toolset
- ARM®, Atollic TrueSTUDIO®
- IAR™, EWARM (IAR Embedded Workbench®)
- Keil™, MDK-ARM™

2.4 Order code

To order the STM32F303xx Discovery kit, use the order code STM32F3DISCOVERY.

3 Features

The STM32F3DISCOVERY offers the following features.

- STM32F303VCT6 microcontroller featuring 256 KB of Flash memory, 48 KB of RAM in an LQFP100 package.
- On-board ST-LINK/V2 with selection mode switch to use the kit as a standalone ST-LINK/V2 (with SWD connector for programming and debugging).
- Board power supply: through the USB bus or from an external 3 V or 5 V supply voltage.
- External application power supply: 3 V and 5 V.
- L3GD20, ST MEMS motion sensor, 3-axis digital output gyroscope.
- LSM303DLHC, ST MEMS system-in-package featuring a 3D digital linear acceleration sensor and a 3D digital magnetic sensor.
- Ten LEDs:
 - LD1 (red) for 3.3 V power-on.
 - LD2 (red/green) for USB communication.
 - Eight user LEDs, LD3/10 (red), LD4/9 (blue), LD5/8 (orange) and LD6/7 (green).
- Two pushbuttons (user and reset).
- USB USER with Mini-B connector.
- Extension header for LQFP100 I/Os for quick connection to prototyping board and easy probing.

A large number of free ready-to-run application firmware examples are available at www.st.com/stm32f3discovery to support quick evaluation and development.

4 Hardware and layout

The STM32F3DISCOVERY is designed around the STM32F303VCT6 microcontroller in a 100-pin LQFP package.

Figure 2 illustrates the connections between the STM32F303VCT6 and its peripherals (ST-LINK/V2, pushbutton, LED, USB, Gyroscope ST MEMS, E-compass with accelerometer ST MEMS, and connectors).

Figure 2 and *Figure 3* help you to locate these features on the STM32F3DISCOVERY.

Figure 2. Hardware block diagram

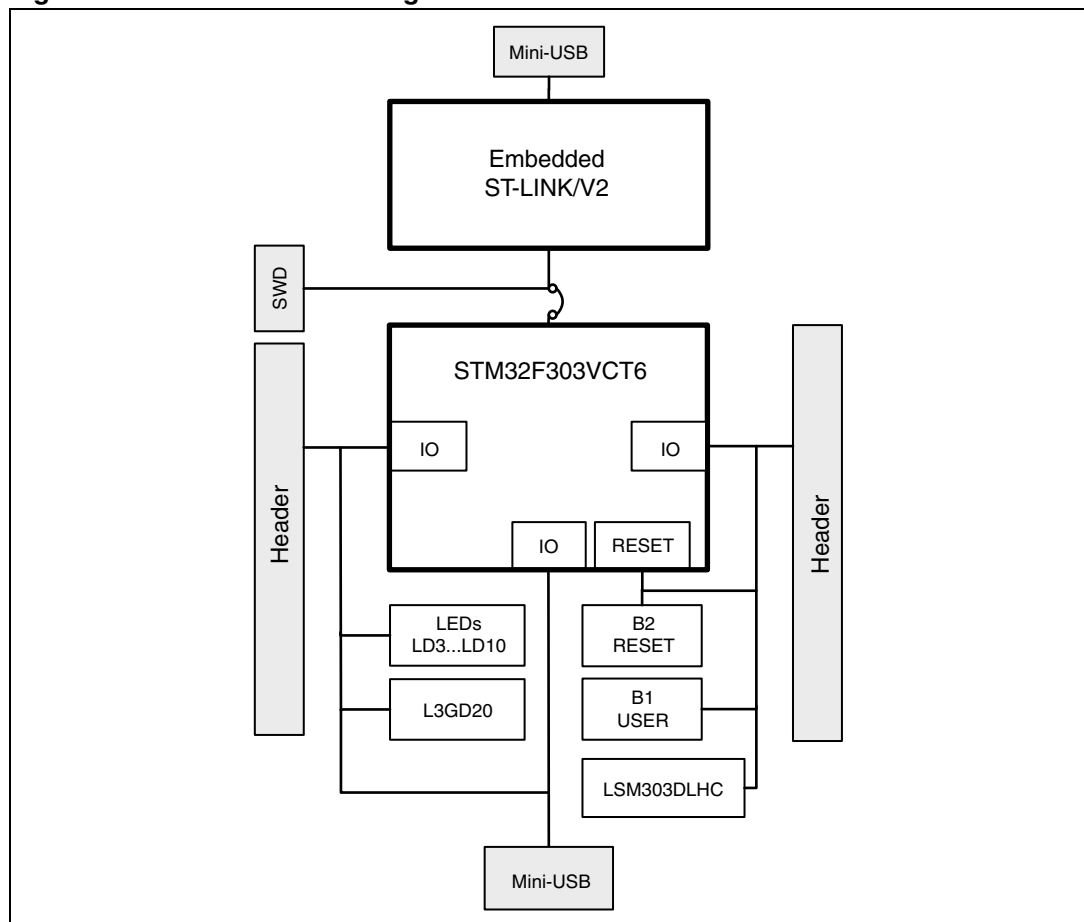

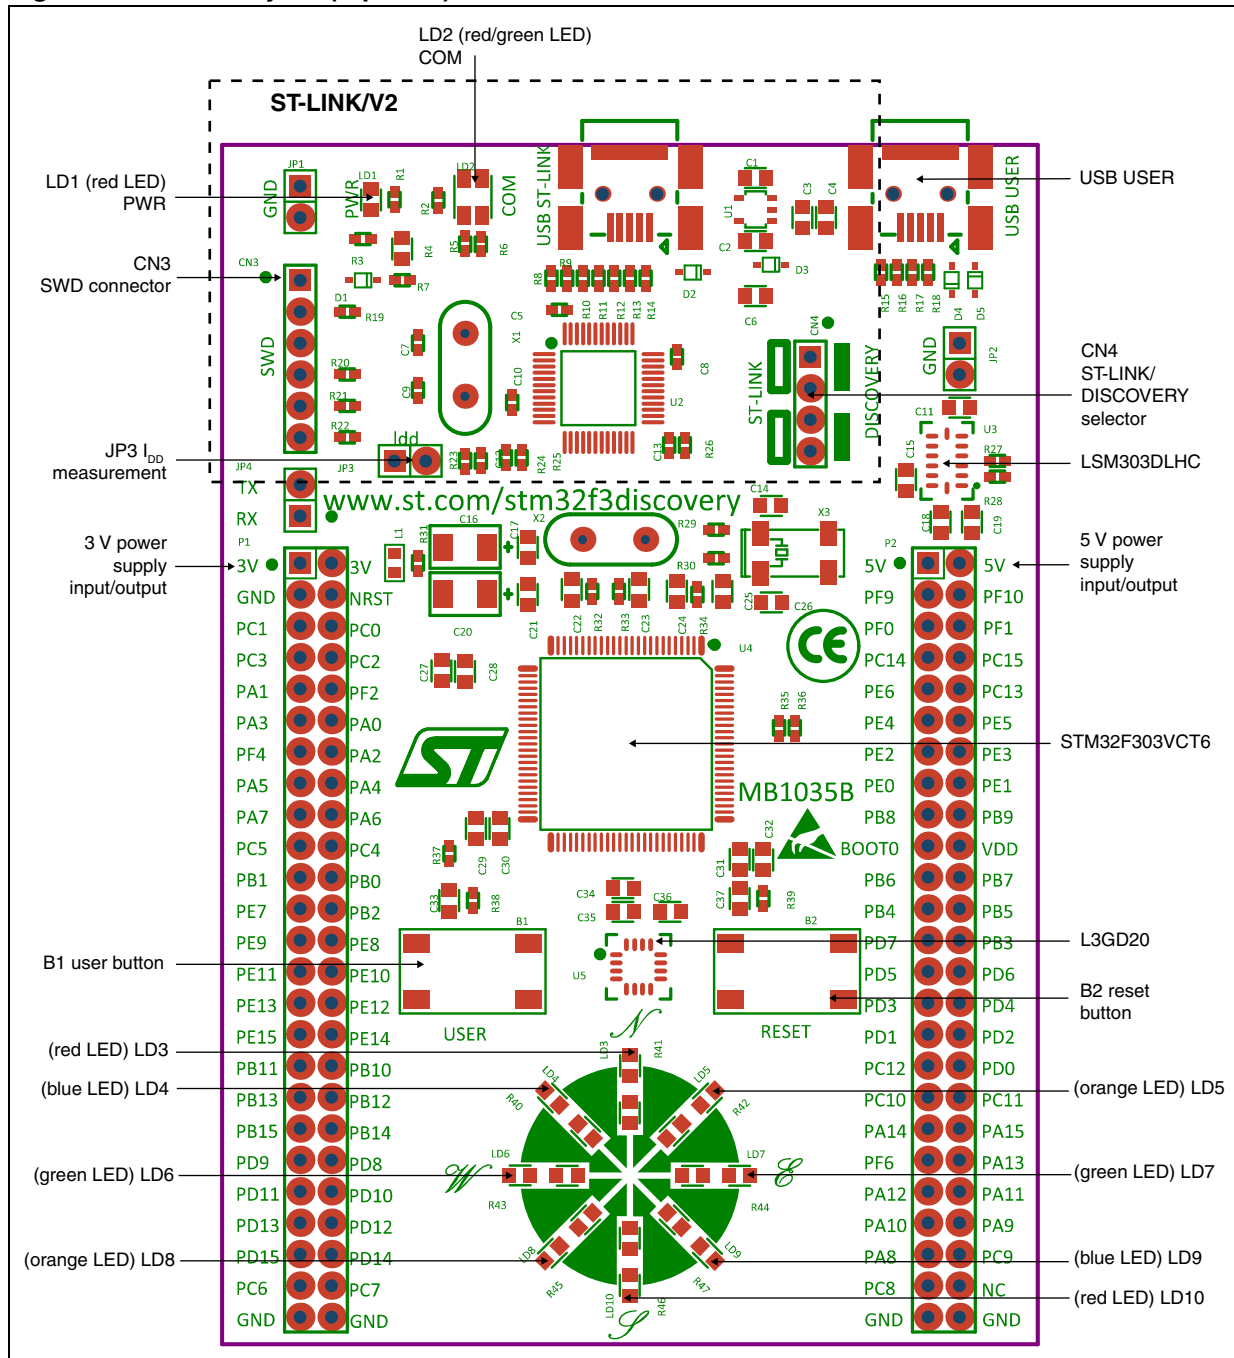

Figure 3. Board layout (top view)

Note: Pin 1 of CN3, CN4, JP3, JP4, P1 and P2 connectors are identified by a square.

4.1 STM32F303VCT6 microcontroller

This ARM™Cortex-M4 32-bit MCU with FPU has 256 KB Flash, 48 KB SRAM, 4 ADCs, two DAC channels, seven comparators, four PGAs, 13 timers, 2.0-3.6 V operation.

Figure 5. STM32F303VCT6 package

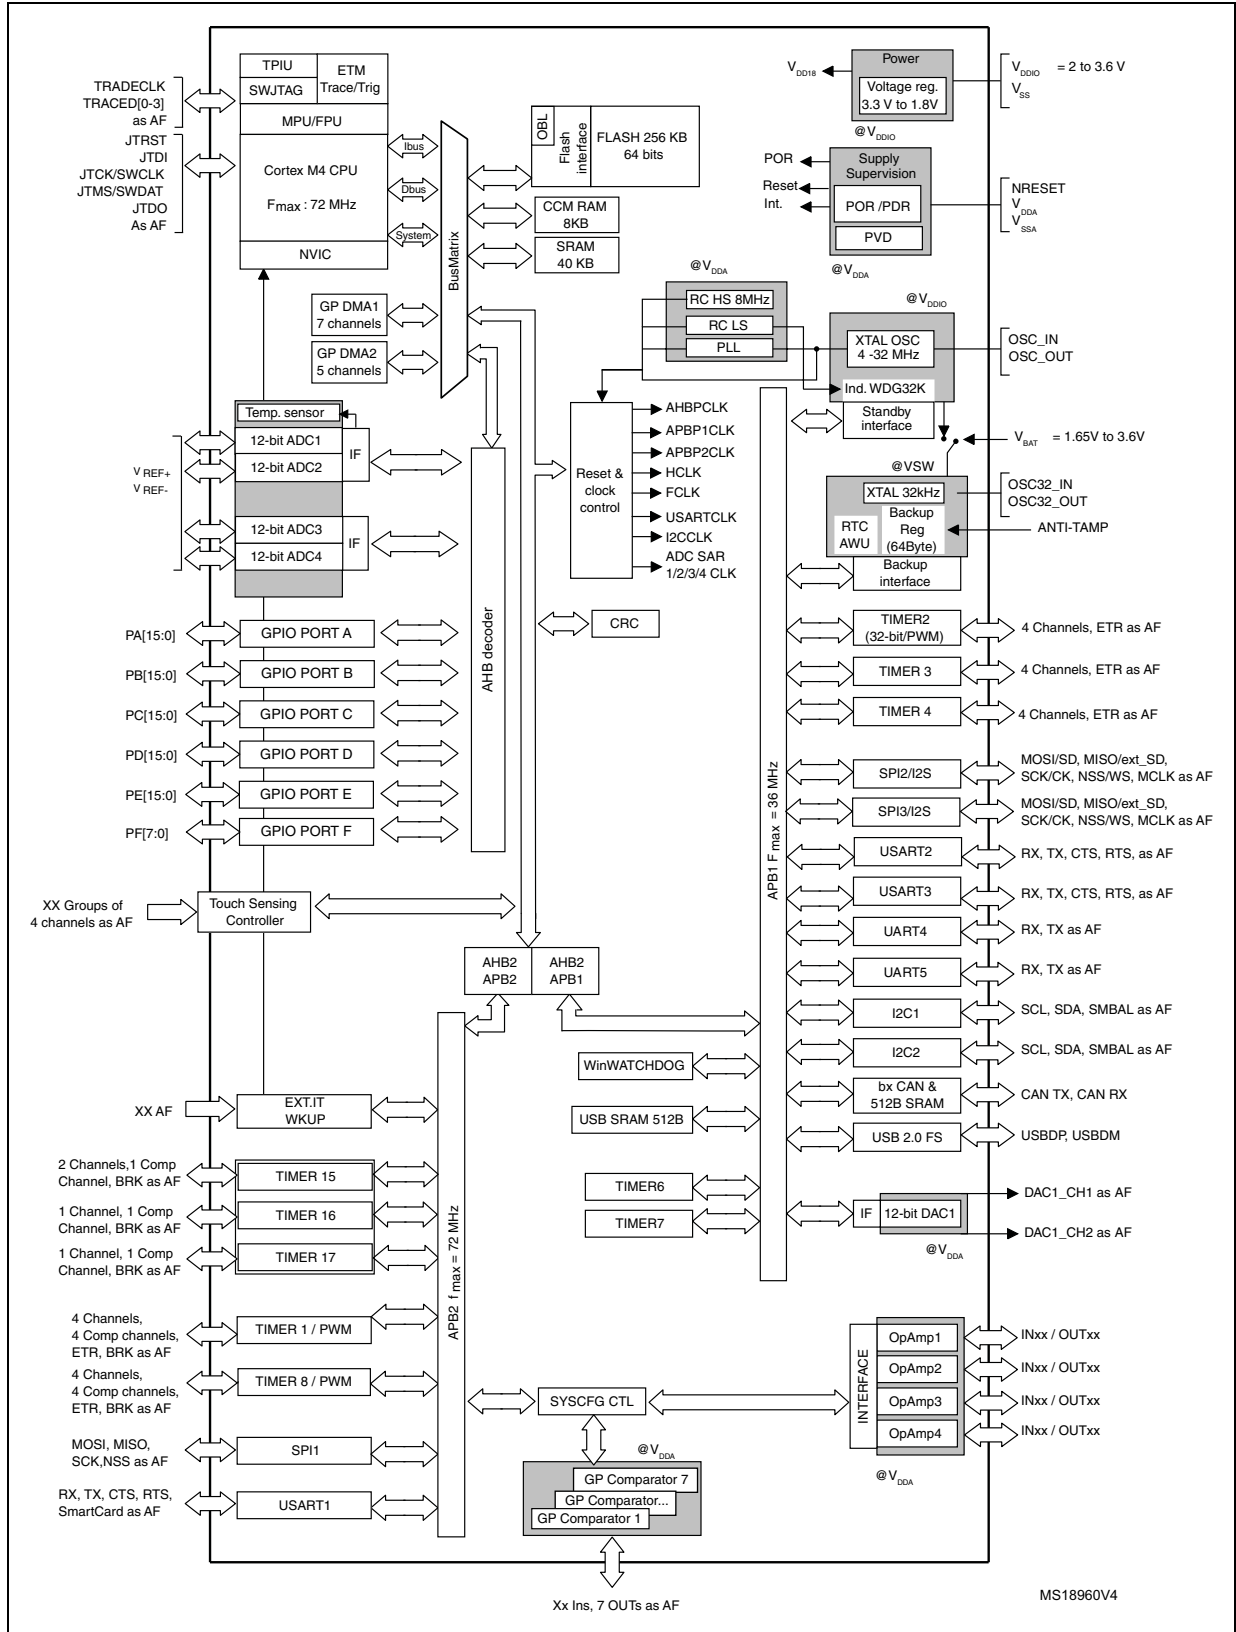

This device provides the following benefits.

- 72 MHz/62 DMIPS (from Flash) or 94 DMIPS (from CCM-SRAM) Cortex-M4 with single cycle DSP MAC and floating point unit:
 - Boosted execution of control algorithms.
 - More features possible for your applications.
 - Ease of use.
 - Better code efficiency.
 - Faster time to market.
 - Elimination of scaling and saturation.
 - Easier support for meta-language tools.
- Real-time performance:
 - CCM-SRAM (core coupled memory): 8 Kbytes of SRAM mapped to the instruction bus; critical routines loaded in the 8-Kbyte CCM at startup can be completed at full speed with zero wait states, achieving 94 Dhrystone MIPS and CoreMark score 155 at 72 MHz.
 - SRAM and CCM-SRAM with parity bit
 - 32-bit AHB bus matrix
 - DMA controllers
 - Memory protection unit (MPU).

More performance for critical routines with zero-wait state execution from safe CCM-SRAM.
- Outstanding power efficiency:
 - Stop mode down to 5.7 μ A typ
 - RTC <2 μ A typ in VBAT mode
 - 2.0 to 3.6 V or 1.8 V +/-8% power supply range
 - Flexibility to reduce power consumption for applications requiring advanced analog peripherals and low-power modes.
 - Running at low voltage or on a rechargeable battery.

- Maximum integration:
 - Up to 256 Kbytes of on-chip Flash memory, 48 Kbytes of SRAM, reset circuit, internal RCs, PLLs, WLCSP package available, More features in space-constrained applications.
- Superior and innovative peripherals:
 - Analog: 4x 12-bit ADC 5 MSPS reaching 18 MSPS in interleaved mode, 3x 16-bit Sigma Delta ADC up to 50 KSPS, fast comparators (50 ns), programmable gain amplifiers (4 gains, 1% accuracy). 12-bit DACs.
 - Up to 17 timers: 16 and 32 bits running up to 144 MHz.
 - Audio: simplex or full duplex I²S interfaces.
 - Up to 12 communication interfaces including 5x USART (9 Mbit/s), 3x SPI/I²S (18 Mbit/s), 2x I²C (1 MHz fast mode plus), CAN (1 Mbit/s), USB full speed.
 - Consumer electronic control (CEC).
 - Cyclic redundancy check (CRC).
 - Capacitive touch-sensing (24 keys).
 - Full set of integration features on chip resulting in simplified board designs and fewer external components.
 - BOM cost reduced.
- Pin compatibility and same API for peripherals as F1 series:
 - More than 350 Cortex-M based compatible STM32 devices.
 - More than 70 Cortex-M4 based compatible STM32 devices.
 - Digital signal processing (DSP) capability at a competitive price.

Figure 6. STM32F303VCT6 block diagram

4.2 Embedded ST-LINK/V2

The ST-LINK/V2 programming and debugging tool is integrated on the STM32F3DISCOVERY. The embedded ST-LINK/V2 can be used in two different ways according to the jumper states ([Table 3](#)).

- Program/debug the MCU on board,
- Program/debug an MCU in an external application board using a cable connected to SWD connector CN3.

The embedded ST-LINK/V2 supports only SWD for STM32 devices. For information about debugging and programming features, refer to user manual UM1075 (ST-LINK/V2 in-circuit debugger/programmer for STM8 and STM32) which describes in detail all the ST-LINK/V2 features.

Figure 7. Typical configuration

Table 3. Jumper states

Jumper state	Description
Both CN4 jumpers ON	ST-LINK/V2 functions enabled for on-board programming (default)
Both CN4 jumpers OFF	ST-LINK/V2 functions enabled for application through external CN3 connector (SWD supported)

4.2.1 Using ST-LINK/V2 to program/debug the STM32F303VCT6 on board

To program the STM32F303VCT6 MCU on the board, simply plug in the two jumpers on CN4, as shown in [Figure 8](#) in red, but do not use the CN3 connector as that could disturb communication with the STM32F303VCT6 of the STM32F3DISCOVERY.

Figure 9. ST-LINK/V2 connections image

4.3 Power supply and power selection

The power supply is provided either by the host PC through the USB cable, or by an external 5 V power supply.

The D1 and D2 diodes protect the 5 V and 3 V pins from external power supplies.

- 5 V and 3 V can be used as output power supplies when another application board is connected to pins P1 and P2. In this case, the 5 V and 3 V pins deliver a 5 V or 3 V power supply and power consumption must be lower than 100 mA.
- 5 V and 3 V can also be used as input power supplies, for example when the USB connectors are not connected to the PC. In this case, the STM32F3DISCOVERY board must be powered by a power supply unit or by auxiliary equipment complying with standard EN-60950-1: 2006+A11/2009, and must be safety extra low voltage (SELV) with limited power capability.

Note: The board can be also powered through the USB USER connector and is protected by D4 and D5 diodes when both USBs are connected (in which case, the 5 V power is around 4.4 volts).

4.4 LEDs

- LD1 PWR: red LED indicates that the board is powered.
- LD2 COM: LD2 default status is red. LD2 turns to green to indicate that communications are in progress between the PC and the ST-LINK/V2.
- User LD3: red LED is a user LED connected to the I/O PE9 of the STM32F303VCT6.
- User LD4: blue LED is a user LED connected to the I/O PE8 of the STM32F303VCT6.
- User LD5: orange LED is a user LED connected to the I/O PE10 of the STM32F303VCT6.
- User LD6: green LED is a user LED connected to the I/O PE15 of the STM32F303VCT6.
- User LD7: green LED is a user LED connected to the I/O PE11 of the STM32F303VCT6.
- User LD8: orange LED is a user LED connected to the I/O PE14 of the STM32F303VCT6.
- User LD9: blue LED is a user LED connected to the I/O PE12 of the STM32F303VCT6.
- User LD10: red LED is a user LED connected to the I/O PE13 of the STM32F303VCT6.

4.5 Pushbuttons

- B1 USER: user and wake-up button connected to the I/O PA0 of the STM32F303VCT6.
- B2 RESET: pushbutton connected to NRST is used to RESET the STM32F303VCT6.

4.6 USB device supported

The STM32F303VCT6 MCU is also used to drive the second USB mini-B connector (USB USER) which allows the board to be used as a USB Device. The STM32F3DISCOVERY can then act as a USB joystick, mouse, or other similar device. If both USBs are connected, diodes D4 and D5 protect the board and use the power from the USB ST-LINK.

The board can be powered through this USB USER connector, then LED1 PWR lights, LED2 COM blinks and it can run an application in standalone mode.

4.7 E-compass/accelerometer MEMS (ST MEMS LSM303DLHC)

The LSM303DLHC is an ultra-compact low-power system-in-package featuring a 3D digital linear acceleration sensor and a 3D digital magnetic sensor. It includes a sensing element and an IC interface able to provide the measured acceleration to the external world through I2C serial interface.

The LSM303DLHC has dynamically user-selectable full scales of $\pm 2g/\pm 8g$ and is capable of measuring acceleration, and a magnetic field full scale from $\pm 1.3g$ to $8.1g$ with an output data rate of 100 Hz or 400 Hz.

The STM32F303VCT6 MCU controls this motion sensor through the I2C interface.

4.8 Gyroscope MEMS (ST MEMS L3GD20)

The L3GD20 is an ultra-compact, low-power, three-axis angular rate sensor. It includes a sensing element and an IC interface able to provide the measured angular rate to the external world through the I2C/SPI serial interface.

The L3GD20 has dynamically user-selectable full scales of ± 250 dps/ ± 500 dps/ ± 2000 dps and is capable of measuring rates.

The STM32F303VCT6 MCU controls this motion sensor through the SPI interface.

4.9 JP3 (Idd)

Jumper JP3, labeled Idd, allows the consumption of the STM32F303VCT6 to be measured by removing the jumper and connecting an ammeter.

- Jumper on: STM32F303VCT6 is powered (default).
- Jumper off: an ammeter must be connected to measure the STM32F303VCT6 current. If there is no ammeter, the STM32F303VCT6 is not powered.

4.10 OSC clock

4.10.1 OSC clock supply

The following information indicates all configurations for clock supply selection.

- **MCO from ST-LINK.** From MCO of the STM32F103C8T6. This frequency cannot be changed, it is fixed at 8 MHz and connected to PF0-OSC_IN of the STM32F303VCT6. Configuration needed:
 - SB12 closed, SB17 open, R33 removed
 - SB18, R32, C22, C23, X2 = don't care
- **Oscillator on board.** From X2 crystal (not provided). For typical frequencies and its capacitors and resistors, please refer to the STM32F303VCT6 Datasheet. Configuration needed:
 - SB12, SB17, SB18 open
 - R32, R33, C22, C23, X2 soldered
- **Oscillator from external PF0.** From external oscillator through pin 5 of the P2 connector. Configuration needed:
 - SB12 open, SB17 closed, R33 removed
 - SB18, R32, C22, C23, X2 = don't care
- **No external oscillator.** From Internal oscillator HSI only. PF0 and PF1 can be used as GPIO. Configuration needed:
 - SB12 open, SB17 closed, SB18 closed, R32 removed, R33 removed
 - C22, C23, X2 = don't care

4.10.2 OSC 32 kHz clock supply

The following information indicates all configurations for the 32 kHz clock supply selection.

- **Oscillator on board.** From X3 Crystal (not provided). Configuration needed:
 - SB14 open, SB16 open.
 - R29, R30, C14, C26, X3 soldered.
- **Oscillator from external PC14.** From external oscillator through the pin 7 of P2 connector. Configuration needed:
 - SB14 open, R29 removed
 - SB16, R30, C14, C26, X3 = don't care
- **No external oscillator.** PC14 and PC15 can be used as GPIO. Configuration needed:
 - SB14 closed, SB16 closed, R29 removed, R30 removed.
 - C14, C26, X3 = don't care.

4.11 Solder bridges

Table 5. Solder bridges

Bridge	State ⁽¹⁾	Description
SB17,18 (X1 crystal) ⁽²⁾	OFF	X1, C22, C23, R32 and R33 provide a clock. PF0, PF1 are disconnected from P2.
	ON	PF0, PF1 are connected to P2 (R32 and R33 must not be fitted).
SB1,3,5,8 (default)	ON	Reserved, do not modify
SB2,4,6,9 (reserved)	OFF	Reserved, do not modify
SB14,16 (X3 crystal)	OFF	X3, C14, C26, R29 and R30 deliver a 32 KHz clock. PC14, PC15 are not connected to P2.
	ON	PC14, PC15 are only connected to P2. Remove only R26, R29
SB23 (B2-RESET)	ON	B2 Push Button is connected to NRST of STM32F303VCT6
	OFF	B2 Push Button is not connected to NRST of STM32F303VCT6
SB20 (B1-USER)	ON	B1 Push Button is connected to PA0
	OFF	B1 Push Button is not connected to PA0
SB13,15 (RX,TX)	OFF	Reserved, do not modify
	ON	Reserved, do not modify
SB7 (NRST)	ON	NRST signal of connector CN3 is connected to NRST of STM32F303VCT6
	OFF	NRST signal is not connected
SB10 (SWO)	ON	SWO signal of connector CN3 is connected to PB3
	OFF	SWO signal is not connected
SB11 (STM_RST)	OFF	No incidence on NRST signal of STM32F103C8T6
	ON	NRST signal of STM32F103C8T6 is connected to GND
SB19 (BOOT0)	ON	BOOT0 signal of STM32F303VCT6 is at level "0" through 510 ohm pull-down
	OFF	BOOT0 signal of STM32F303VCT6 is at level "1" through 10K ohm pull-up (not provided).
SB21,22 (USB USER)	OFF	PA11 and PA12 are only used for USB USER and not connected to P2 to avoid noise.
	ON	PA11 and PA12 are connected to P2.
SB12 (MCO) ⁽²⁾	OFF	MCO signal of STM32F103C8T6 is not used.
	ON	MCO clock signal from STM32F103C8T6 is connected to OSC_IN of STM32F303VCT6.

1. Default state is shown in bold.

2. If SB12 is ON, SB17 must be OFF and R33 removed to provide the clock source from the MCO correctly.

4.12 Extension connectors

The male headers P1 and P2 can connect the STM32F3DISCOVERY to a standard prototyping/wrapping board. STM32F303VCT6 GPI/Os are available on these connectors. P1 and P2 can also be probed by an oscilloscope, logical analyzer or voltmeter.

Table 6. STM32F303VCT6 MCU pin description versus board function

7 Revision history

Table 7. Document revision history

Date	Revision	Changes
10-Sep-2012	1	Initial release.
20-Sep-2012	2	Added Figure 7 on page 14 and updated Figure 14 on page 34

Please Read Carefully:

Information in this document is provided solely in connection with ST products. STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, modifications or improvements, to this document, and the products and services described herein at any time, without notice.

All ST products are sold pursuant to ST's terms and conditions of sale.

Purchasers are solely responsible for the choice, selection and use of the ST products and services described herein, and ST assumes no liability whatsoever relating to the choice, selection or use of the ST products and services described herein.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted under this document. If any part of this document refers to any third party products or services it shall not be deemed a license grant by ST for the use of such third party products or services, or any intellectual property contained therein or considered as a warranty covering the use in any manner whatsoever of such third party products or services or any intellectual property contained therein.

UNLESS OTHERWISE SET FORTH IN ST'S TERMS AND CONDITIONS OF SALE ST DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY WITH RESPECT TO THE USE AND/OR SALE OF ST PRODUCTS INCLUDING WITHOUT LIMITATION IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE (AND THEIR EQUIVALENTS UNDER THE LAWS OF ANY JURISDICTION), OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT.

UNLESS EXPRESSLY APPROVED IN WRITING BY TWO AUTHORIZED ST REPRESENTATIVES, ST PRODUCTS ARE NOT RECOMMENDED, AUTHORIZED OR WARRANTED FOR USE IN MILITARY, AIR CRAFT, SPACE, LIFE SAVING, OR LIFE SUSTAINING APPLICATIONS, NOR IN PRODUCTS OR SYSTEMS WHERE FAILURE OR MALFUNCTION MAY RESULT IN PERSONAL INJURY, DEATH, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE. ST PRODUCTS WHICH ARE NOT SPECIFIED AS "AUTOMOTIVE GRADE" MAY ONLY BE USED IN AUTOMOTIVE APPLICATIONS AT USER'S OWN RISK.

Resale of ST products with provisions different from the statements and/or technical features set forth in this document shall immediately void any warranty granted by ST for the ST product or service described herein and shall not create or extend in any manner whatsoever, any liability of ST.

ST and the ST logo are trademarks or registered trademarks of ST in various countries.

Information in this document supersedes and replaces all information previously supplied.

The ST logo is a registered trademark of STMicroelectronics. All other names are the property of their respective owners.
